Introduction

The introduction of technological system called "blockchain" has provided a way for various parties and individual to come in an agreement on the state of a database, without the involvement of a third party, participant which is simply known as the middleman.

The provision of a decentralized ledger, with the idea of being self-administered has further elevate the technology, into more acceptance. Blockchain provide strict and specific services ranging from the financial sector, tourism, payments, or securitization. This is done using the Blockchain Technological System without the involvement of any third party.

The blockchain has also made it with its traceability system, which allows the use of inbuilt tools called the "smart contracts" which could potentially automate manual processes, from compliance and claims processing, to distributing the contents of a will.

The Cryptocurrency market is growing exponentially, with thousands of currencies already present and available in the current marks which has been launched for several years, yet they've not been able to fulfill their true potential and worth. This is where FlashX Advance came into existence, as it has provide and establish itself as the best solution provider to all.

What is FlashX Advance?

FlashX Advance is a new generation of cryptocurrency, which belongs to the family of utility token, used and implemented in our platform, the token is developed and maintained for various purposes of various industrialization which includes the uses of the token, for staking, gaming, and fees for delivery of goods and services.
